Alicante, Spain | EU citizen (no visa sponsorship required) | Available immediately | Open to remote & relocation

Education

Universidad de Alicante — Alicante, Spain
BSc in Computer Engineering – Software Engineering track — *Aug. 2022 – Jul. 2026*

Experience

Backend Software Engineer Intern — Jun. 2026 – Aug. 2026
NAX Solutions — *Alicante, Spain*

- Built and maintained 10+ REST endpoints in Python with Django Ninja for a B2B satellite-imagery data platform in the AgTech sector.
- Proposed and led a refactor of key endpoints, replacing complex filter logic with flat REST resources to improve response times, scalability and consistency with the team's API standards.
- Turned product requirements (Source of Truth) into technical specifications and actionable development tasks within an Agile team.
- Contributed to migration scripts moving high-volume analytical data from ClickHouse to PostgreSQL.
- Managed dependencies and package upgrades with Poetry, keeping the system stable through integration tests in GitLab CI/CD pipelines.

Software Engineer Intern (AI/Backend) — Jun. 2025 – Dec. 2025
Beply — *Remote, Spain*

- Designed and built the initial multi-agent architecture behind the company's conversational virtual agent, laying the foundation of its AI infrastructure.
- Developed a decoupled, fault-tolerant agent system in Python with Google ADK (LlmAgent, BaseTool) that routes client requests to specialized AI agents.
- Built an automated Pytest suite validating the consistency of model responses and database integrity before production deployments.

Bachelor's Thesis & Research

Autonomous Drone Navigation with VLMs | Code & demo — Jan. 2026 – Jul. 2026
Python, Unity, Ollama, Qwen3-VL

- Designed and built an autonomous navigation system for a Unity-simulated drone, guided by a VLM (Qwen3-VL) through Ollama.
- Implemented a perception–action loop inspired by See, Point, Fly that turns camera input into trajectories, building on VLN-Pilot.
- Added a collision safety layer, explicit-goal missions and a prompt system with context injection.
- Reached the goal in 64.4% of test runs (29/45), versus 22.2% for the baseline using the same model.

Technical Skills

Languages: Python, SQL (PostgreSQL, ClickHouse, MySQL), Java, C++
Frameworks & APIs: Django, Django Ninja, FastAPI, Flask, REST APIs, Pytest
AI & Data: Google ADK, LLM/VLM integration, Multi-Agent Systems, Prompt Engineering, Ollama
Tools & DevOps: Git, GitLab CI/CD, Docker, Poetry, Agile (Scrum/Kanban)

Languages

Spanish: Native | **English**: Professional working proficiency (C1)
